

CLAIMS

1. A test kit for introducing a protein and/or peptide into
cells
5 which comprises a container containing a cationic
group-containing polymer and a container containing a reagent
for coupling or binding the cationic group-containing polymer
to the protein and/or peptide.
- 10 2. A test kit for introducing a protein and/or peptide into
cells
which comprises a container containing a cationized
conjugate to be coupled to the protein and/or peptide.
- 15 3. A method of introducing a protein and/or peptide into cells
which comprises using a conjugate generated by coupling
or binding of a cationic group-containing polymer to a protein
and/or peptide as a carrier for the introduction target protein
and/or peptide.
20
4. The method of intracellular peptide and/or peptide
introduction according to Claim 3,
wherein said conjugate-forming protein and/or peptide
comprises at least one protein and/or peptide selected from the
25 group consisting of avidins, protein A and/or protein G, and
antibodies.
